

Remarks/Arguments

Claims 1-38 have been amended to better capture the invention. The nature of the amendments are highlighted by the marked up set of claims. Many of the changes are related to the substitution of the word vermin for pest, vermin control manager for service technician, or replacement of building with site. Changes have been made to remove multiple dependencies.

Claim 7 has been amended to note that this system can be integrated with a system that kills vermin rather than captures them. This is consistent with the discussion of the use of chemicals to kill pests such as on page 18 of the published application.

New claim 38 applies the limitation of amended claim to claim 1 rather than claim 22.

New claim 39 adds limitations to claim 1 that relate to the vermin-related information analyzing module (for example, see module 2002 page 12) and control time determining module (for example, see module 2014 pages 13-14).

Claim 40 captures that there may be repeated transmissions (see for example page 19 lines 8-26)

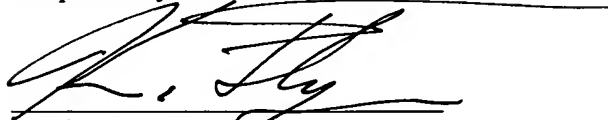

Claim 41 arises from removing the multiple dependency from claim 18.

Claim 42 adds the limitation that appears in other claims that the predetermined time is nighttime.

It is believed that none of the amendments to the claims and none of the new claims add new matter to this application.

Dated: 02 March, 2005

Respectfully submitted,

Kevin E. Flynn, /Reg. No. 37,325
